Summary

Product Manager driving the full product lifecycle, with six years of hands-on experience across support and revenue operations, compliance-driven fintech, and enterprise B2B SaaS. I've owned discovery, delivery, and everything in between. I bring a rare view of how products are built, how they break down in the real world, and what it actually takes to fix them. I partner closely with engineering, design, and compliance to turn complex problems into clear, shippable solutions, and I use AI natively, from Claude Code prototypes to exploring agentic AI workflows, to accelerate discovery without using engineering resources.

Core Skills

Discovery & Framing • PRD and User Story Writing • Requirements Gathering • Success Metrics Definition • Roadmap Prioritization • Competitive Analysis • Persona Development • Compliance & Regulatory Requirements • Cross-Functional Collaboration • Stakeholder Communication • Agile Environment • Problem-Solving • Customer-Centric Mindset • Customer Needs Analysis • Storytelling • AI-Assisted Prototyping • Claude Code • Agentic AI Workflows • MCP Integrations • Figma • JIRA • Asana • Confluence • Salesforce • Zendesk • Omnichannel

Experience

RockWallet

Product Manager | Jan 2026 – May 2026

- Owned product delivery from discovery through dev handoff across 3 features on a mobile-first iOS and Android crypto wallet — spanning self-serve account management and compliance infrastructure, with 3 additional staged for development entry at time of departure.
- Authored PRDs, full user story suites, acceptance criteria, functional requirements, and error handling specifications across every feature owned — defining success metrics upfront, validating post-launch outcomes against them, and scoping two features to require zero net-new screens by building reuse decisions into requirements early.
- Partnered with the CCO and compliance stakeholders to embed data retention requirements, identity verification logic, and fraud audit trail standards directly into product scope — ensuring regulatory constraints were resolved before development began — treating compliance as a product requirement, not a post-launch check.
- Led biweekly cross-functional stakeholder reviews with executives, compliance, engineering, design, and operations — synthesizing competing priorities into actionable requirements that kept sprint planning on track.
- Served as the domain SME for the engagement and retention surface — developing deep product knowledge across the engagement surface and identifying activation and retention leverage points to inform roadmap prioritization.
- Spearheaded a competitive intelligence initiative across 11 fintech and crypto wallet products — mapping table stakes and above-parity opportunities across 3 user archetypes to define roadmap gaps and MVP guardrails.

- Designed an AI-assisted discovery framework using adversarial prompt structures and persona-based social modelling to stress-test MVP criteria across 3 features — producing 17 minimum viable requirements, T-shirt sized and classified by effort, before design began.
- Executed unmoderated user research studies via Userlytics for iOS and Android — developing mobile wireframe prototypes, scenario-based question flows, and 1–7 confidence and willingness scales to surface actionable insights that shaped onboarding flow decisions and KYC scope.
- Built 6 browser-based prototypes in React, Next.js, and Tailwind CSS using Claude Code, guardrailed to the live Figma design system, and pushed to a shared PWA — cutting concept-to-artifact time without pulling a single engineering resource.

Q4 Inc.

Jan 2020 – Aug 2025

Revenue and Enablement Specialist, Business Ops | Nov 2023 – Aug 2025

- Led the end-to-end implementation of Spekit, an AI-powered knowledge management platform — designing content architecture and migrating 1,500+ assets to create a unified source of truth across internal systems, driving a 30% increase in self-serve knowledge access and reducing support escalations.
- Became the internal SME for Q4's enablement platform and client-facing product suite — fielding questions from across the org, translating product updates into practical guidance, and maintaining deep knowledge of how client-facing teams used the tools day to day.
- Evaluated program effectiveness using engagement, performance analytics, and data visualization to improve knowledge retention and strengthen program management visibility through key metrics.
- Aligned enablement content with feature updates, major release cycles, and a new client service model in partnership with Product, Design, and Engineering.
- Coordinated go-to-market readiness for major product releases — building launch playbooks, training materials, and rollout communications that ensured client-facing teams were equipped to speak to new features from day one.
- Managed project roadmaps, competing priorities, and cross-functional dependencies using Asana and Google Sheets to support ongoing product and revenue operations initiatives.
- Conducted internal user research to surface pain points and insights, using feedback to shape system structure, documentation strategy, and future training priorities.
- Designed and delivered scalable learning programs and playbooks for client-facing teams, contributing to a 20% faster average onboarding ramp and measurable improvements in product confidence.
- Built clear, engaging e-learning assets — including content creation of modules, webinars, and videos — to simplify complex product functionality and achieve a 100% satisfaction score on training feedback surveys.
- Maintained 90%+ content management accuracy, strengthening cross-team communication and operational efficiency.

Project Manager, PMO | Aug 2021 – Dec 2021

- Coordinated timelines, dependencies, and deliverables across Operations, Product, and Enablement using Asana and Airtable for task management and Google Sheets for project tracking and reporting.
- Collaborated with internal stakeholders and external vendors to define scope, budget, and implementation plans for tooling and workflow enhancements.
- Developed and maintained project documentation, reporting, and communication plans to ensure visibility and alignment across all stakeholders.
- Applied structured project management practices to balance competing priorities, mitigate risks, and maintain delivery momentum.

Team Lead, Website Content Support | Jan 2021 – Nov 2023

- Partnered with Business Operations and the internal Salesforce team to deploy Forethought AI triage in Salesforce Service Console (2022) — designing queue logic, escalation workflows, and routing rules that cut Time to First Pending by 70% (4.4 to 1.4 hours) and reduced case backlog by 30% during peak quarters.
- Applied business intelligence and CRM data analytics (Salesforce, Tableau) to uncover volume trends, improve prioritization decisions, and support resource planning during peak quarters.
- Redesigned support workflows using CRM data insights and process automation — sustaining 90%+ SLA attainment across a team of 13 analysts during high-growth quarters.
- Partnered with Customer Experience and Product teams to advocate for self-serve features in Q4's proprietary CMS — reducing inbound support volume by enabling clients to handle routine updates independently, freeing the support team to focus on higher complexity work.
- Served as the liaison between Customer Success, Product, and Business Operations, bringing strong client advocacy into platform updates, service model changes, and product strategy rollouts through structured feedback loops and cross-functional planning.
- Supported the S&P Global Market Intelligence client migration (2021), onboarding ~500 new IR sites to Q4's platform — a high-volume transition requiring rapid team scaling and process adaptability.
- Designed and tracked KPIs (including SLA attainment and team capacity metrics) that guided planning and performance management.
- Hired, trained, and developed new team members to meet increasing client demand without compromising quality.
- Balanced internal projects, client needs, and team capacity during high-growth, high-pressure phases to sustain service delivery and team performance.

Analyst, Website Content Support | Jan 2020 – Jan 2021

- Partnered with Customer Experience and Product teams to align on platform updates, service model changes, and strategic rollouts — translating user insights into operational improvements.
- Maintained and updated investor-relations websites in Q4's proprietary CMS with 100% SLA success for live earnings events, ensuring accuracy and uptime for time-sensitive financial disclosures.
- Diagnosed front-end issues (HTML, CSS/SCSS, JavaScript) and implemented fixes that balanced speed and quality assurance.
- Co-founded and led the "Earnings Committee," a cross-functional initiative that optimized support workflows during quarterly reporting cycles and later scaled into a dedicated operations team.
- Trained and mentored new analysts, creating documentation and QA processes that accelerated onboarding, improved consistency, and maintained top client satisfaction ratings.

Education

Product Management — BrainStation (2026)

UI Design — BrainStation (2019)

Full-stack Web Development — BrainStation (2018)

Mechanical Engineering: Robotics & Automation — Conestoga College (2015)

Technology Foundations Engineering — Conestoga College (2014)
